## AMENDMENTS TO THE CLAIMS

 (Currently Amended): A minimally invasive surgical method, comprising: forming an incision through tissue located adjacent to a vertebra in a patient's spinal column; identifying a muscle plane <u>between muscles</u>;

inserting a substantially planar blunt tip of a tool through the incision while manipulating the blunt tip along the muscle plane extending between the incision and the vertebra to separate the muscles.

- (Original): The method of claim 1, wherein the longissimus thoracis and multifidus muscles are separated.
- (Original): The method of claim 1, wherein the incision is a minimally invasive percutaneous incision.
- (Original): The method of claim 1, further comprising inserting a guide wire through a lumen
  extending through the tool.
- (Original): The method of claim 4, wherein the guide wire extends into the vertebra.
- (Original): The method of claim 4, further comprising removing the tool from the guide wire such that the guide wire extends between the incision and the vertebra.
- (Original): The method of claim 6, further comprising delivering a spinal anchor along the guide wire and implanting the spinal anchor in the vertebra.
- (Original): The method of claim 6, further comprising inserting a plurality of dilators over the guide wire to dilate tissue surrounding the guide wire.
- (Original): The method of claim 8, further comprising inserting a cannula over the plurality of dilators and removing the dilators.
- (Original): The method of claim 9, further comprising delivering a spinal anchor through the cannula.
- (Original): A minimally invasive surgical method, comprising: making a first incision in a patient;

Docket No.: 101896-283 (DEP5154USCIP)

Application No. 10/711,704 Amendment dated Reply to Office Action of May 18, 2007

inserting a blunt tip of a tool through the first incision and manipulating the blunt tip to create a first pathway from the first incision, between a muscle plane, to a first site on a first vertebral body;

advancing a guide wire through the tool to position a distal end of the guide wire adjacent the first site.

- 12. (Original): The method of claim 11, further comprising removing the tool and advancing a first implant along the guide wire to the first site on the first vertebral body.
- 13. (Original): The method of claim 12, further comprising placing a fixation element through the first pathway in an orientation substantially parallel to a longitudinal axis of the first pathway, and coupling a portion of the fixation element to the first anchor.
- (Original): The method of claim 11, further comprising: making a second incision in a patient;

inserting a blunt tip of a tool through the second incision and manipulating the tool to create a second pathway from the second incision, between a muscle plane, to a second site on a second vertebral body; and

advancing a guide wire through the tool to position a distal end of the guide wire adjacent to the second site.

- 15. (Original): The method of claim 14, further comprising removing the tool and advancing a second implant along the second pathway to the second site on the second vertebral body.
- 16. (Original): The method of claim 15, further comprising placing a fixation element through the first pathway and coupling a portion of the fixation element to the first and second implants.
- 17. (Original): The method of claim 16, wherein the fixation element is inserted through the first pathway in an orientation substantially parallel to a longitudinal axis of the first pathway.
- 18-24. (Canceled).
